### air requirements

- 100-120 psi, 3.5 cfm

### weight

- 1,800 lbs.

# Model 77 Sleeve Plate Demounter

## Parts Replacement Instructions

During the loading and unloading of sleeves on the DEMOUNTER, the rubber grippers may get damaged or peel off requiring repairs or replacements.

Please see the instructions below for the proper procedure.

## Replacing Rubber Gripper Strips On The Expander

Remove the rubber gripper strips and excess hardened glue from all of the expander bars. Coat each bar and rubber strip (one at a time) with the adhesive glue along the top and sides of the expander bar at the height of the rubber strip. Press the "U" shaped rubber over the top of the expander bar and press down tight until the rubber makes solid contact with the top and sides of the bar. Some trimming may need to be done on some expander bars.

**Allow the adhesive to cure 24 hours for the best results.**

## Available Replacement Parts

50 ft. Gripper Strips part # 8510K25  
1 qt. Adhesive Glue part # 4799  
2"x36 yds. Grip Tape for Roller # 5401X2  
Repair/Replacement Kit # DMEXPARTSKIT  
Includes all above parts
